## **CHOICE IRISES**

**GROWN AT** 

# Sunnyside Gardens NATICK, MASS.

L. MERTON GAGE, Grower

#### SUNNYSIDE GARDENS

Are located at No. 64 North Avenue. Visitors are welcome any day in the week. I grow more than 500 varieties of the best modern kinds, including a great many of the recent novelties of merit, and several thousand seedlings of my own raising.

#### **IMPORTANT**

Postage will be paid on all orders amounting to \$2.00 or more. Orders for less than \$1.00 are not accepted. 25% discount allowed on orders amounting to \$10 or more, except varieties priced Net. We begin shipping the middle of July and up to the first of September. To Southern States and the West Coast until late October.

#### **SUBSTITUTES**

Late orders should include a list of substitutes in case some varieties are sold out. Otherwise your money will be returned for varieties out of stock.

#### SHIPPING

None but fully matured and blooming-size roots, properly dried out before packing, are sent out. Fresh dug roots, packed too soon after digging, are liable to sweat in transit, if the weather is hot, especially if they are packed in a tightly-closed box with no ventilation. The rhizome then becomes soft, followed by rot, soon after planting. (Holes are always punched in the box to give free circulation of air). Always examine the rhizomes soon as received, and if they are not firm and hard return at once to the dealer you purchased them from.

#### JOIN THE AMERICAN IRIS SOCIETY

You will receive four Bulletins each year, chock full of Iris interest, all for \$3.00. Send your remittance to Howard Watkins, 821 Washington Loan and Trust Co. Building, Washington, D. C.

#### DYKES MEMORIAL MEDAL

The judges of the American Iris Society awarded the Dykes Memorial Medal to L. Merton Gage, for his Iris, Rosy Wings, as the most meritorious American Iris of 1939. This medal is presented by the Iris Society (British), yearly.

#### **BRONZE MEDALS**

The Bronze Medal of the Massachusetts Horticultural Society was presented to L. Merton Gage, for his Sunnyside Gardens Collection of Irises, in

Boston, June 8th, 1932.

The Bronze Medal of the A.I.S. was awarded to Iris DAMERINE (Gage, 1939), at the GARDENS ON PARADE at the NEW YORK WORLD'S FAIR, May, 1940. The winning stalk was exhibited by Mr. Kenneth D. Smith, Staten Island, N. Y., who received the Medal.

The Bronze Medal For Ashievement in Hybrid.

The Bronze Medal For Achievement in Hybridizing was awarded to L. Merton Gage, April, 1943, by the American Iris Society.

AWARD OF MERIT

Presented to L. Merton Gage by the Royal Horticultural Society and The Iris Society (England), jointly, to Bearded Iris Rosy Wings, June 9th, 1942.

CULTURAL DIRECTIONS

Tall bearded Iris should never be planted in a location where water settles, and the melting snows of late winter form a coating of ice over the beds. If your garden is in a low place, build up the beds four or six inches, and be sure that the drainage is adequate to allow water to go down through the soil freely.

Do not plant too deep, but so that the rhizome is just below the surface. Spread out the roots and water the hole. Then draw the earth around the rhizome and firm well, and do not water again

unless there is a continued dry spell.

out being disturbed.

If the soil is heavy and drainage is poor, white (coal) ashes will lighten it, and the clinkers may be placed in the bottom of the bed, about 18 inches down for drainage. Do not use the red ashes if white are obtainable. There is a lime element in the white ashes that is absent in the red, and this seems to be just the right chemical compound that is beneficial to many plants, Irises in particular. Use freely. Well-rotted manure may be safely used, if it does not come in contact with the rhizomes. rhizomes.

There is no fixed rule as to how often Irises Varieties that increase rapidly should be divided. should be divided and reset every third year, some perhaps every second year, but Irises that increase slowly will sometimes do well for five years with-

Irises do not bloom well in too shady a location, as they require plenty of sunshine. A southern exposure is best, and do not plant them on the north or west side of a building. When replanting an old bed add a good portion of fresh soil taken from some place in the garden where irises have not grown before. Late planted irises sometimes do not have time to grow good anchorage roots to protect them against spring heaving caused by alternate thawing and freezing, and it is advisable to mound up these plants at the time of planting as is done by hilling up potatoes, or, at least, before the ground freezes. Mulching or covering with boxes is also a good way to give them protection against heaving, but if boxes are used, put a stone or brick under one side to give them ventilation.

## TALL BEARDED IRIS

# Sunnyside Gardens' Introductions

**FOR 1946** 

#### FROM REV. ALLAN D. CREELMAN

NAOMI CREELMAN—(Creelman, 1946). This is a dark brown self with very large flowers of excellent substance and velvety texture. Domed standards and straight falls. Golden beard. Slightly fragrant. Height 30-inch ......\$5.00 SUSAN TERRY—(Creelman, 1946). A violet self with very large flowers, with soft, brown venations. Wonderful branching, heavy substance and smooth texture. Domed standards and semi-flaring falls. Mild fragrance, early and increases rapidly. Height 48-inch .....\$5.00

#### FROM MRS. WALTER E. TOBIE

Height 48-inch ......\$5.00

rapidly.

BRIDAL MORN—(Tobie, 1946). A very fine white with slight yellow heart and no venations. Standards tight and a well balanced flower of good size and heavy substance and velvety tex-Light yellow beard. Makes a fine clump.
